Module 10: Using environment statistics for national analysis and policy

Environmental SDG Indicators e-learning course

Name: Babul Deb

Date: November 22, 2023

About the module:

Module 10 explains how to use environment statistics for national analysis and policy development. It provides key definitions and concepts and describes what the environmental policies are, why they are needed and where they originate from. It further describes the relationship between the environmental statistics and policy process. The module is supported with case studies examining the use of environment statistics in national policies.

Learning objectives:

Following the completion of the module, participants will be able to:

1. Explain how environment statistics are used to inform national policymaking;
2. Describe the opportunities for ex ante and ex post policy uses of environment statistics;
3. Identify environment statistics aligned with international standards in support of the relevant policies;
4. Describe principles and procedures of international frameworks for data quality and production in national statistical frameworks.
