# Module 7: Sustainable consumption and production interventions in the SDGs

---

## Environmental SDG Indicators e-learning course

**Name:** Babul Deb

**Date:** November 22, 2023

### About the module:

Module 7 introduces the concept of sustainable consumption and production (SCP) and provides its history. The module discusses the importance of monitoring SCP across different levels and how it is addressed in the SDGs. It provides computation methodologies for eight SDG indicators under UNEP custodianship (SDG indicator 8.4.1/12.2.1, SDG indicator 8.4.2/12.2.2, SDG indicator 12.1.1, SDG indicator 12.3.1b, SDG indicator 12.5.1, SDG indicator 12.6.1, and SDG indicator 12.7.1). Lastly, the module briefly introduced non-UNEP SDG Indicator 7.3.1 that is also of relevance to SCP.

### Learning objectives:

Following the completion of the module, participants will be able to:

1. Discuss the importance of sustainable consumption and production in monitoring and tracking progress towards the SDGs and the 2030 Agenda for Sustainable Development;
2. Explain the methodologies for the nine UNEP SDG indicators and limitations in their computation;
3. Describe key terms and definitions associated with sustainable consumption and production;
4. Identify multilateral environmental agreements (MEAs) and other intergovernmental frameworks that directly and/or indirectly address sustainable consumption and production;
5. Describe seven SDG indicators that indirectly cover sustainable consumption and production.
